Preface

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Duis risus ante, auctor et pulvinar non, posuere ac lacus. Praesent egestas nisi id metus rhoncus ac lobortis sem hendrerit. Etiam et sapien eget lectus interdum posuere sit amet ac urna.

Un-numbered sample section

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Duis risus ante, auctor et pulvinar non, posuere ac lacus. Praesent egestas nisi id metus rhoncus ac lobortis sem hendrerit. Etiam et sapien eget lectus interdum posuere sit amet ac urna. Aliquam pellentesque imperdiet erat, eget consectetur felis malesuada quis. Pellentesque sollicitudin, odio sed dapibus eleifend, magna sem luctus turpis.

Another sample section

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Duis risus ante, auctor et pulvinar non, posuere ac lacus. Praesent egestas nisi id metus rhoncus ac lobortis sem hendrerit. Etiam et sapien eget lectus interdum posuere sit amet ac urna. Aliquam pellentesque imperdiet erat, eget consectetur felis malesuada quis. Pellentesque sollicitudin, odio sed dapibus eleifend, magna sem luctus turpis, id aliquam felis dolor eu diam. Etiam ullamcorper, nunc a accumsan adipiscing, turpis odio bibendum erat, id convallis magna eros nec metus.

Structure of book

Each unit will focus on <SOMETHING>.

About the companion website

The website[1] for this file contains:

- A link to (freely downlodable) latest version of this document.
- Link to download LaTeX source for this document.
- Miscellaneous material (e.g. suggested readings etc).

Acknowledgements

- A special word of thanks goes to Professor Don Knuth[2] (for TEX) and Leslie Lamport[3] (for LATEX).
- I'll also like to thank Gummi[4] developers and LaTeXila[5] development team for their awesome LATEX editors.
- I'm deeply indebted my parents, colleagues and friends for their support and encouragement.

1

Introductory Chapter

"Available energy is the main object at stake in the struggle for existence and the evolution of the world."

– Ludwig Boltzmann

1.1 Boltzmann's Distribution

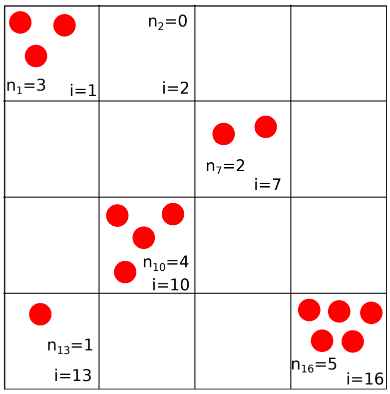
1.1.1 Gas Example

N Gas particles occupy small volumetric cells $i = 1, 2, 3, \cdots, s$ of phase space, with occupation number n_i. Particle number is conserved so

$$\sum_i n_i = N \tag{1.1}$$

The number of ways W that any particular distribution $\{n_1, n_2, ..., n_s\}$ of particles will fall within their respective volumetric cells in phase space is given by the multinomial formula

$$W = \frac{N!}{(n_1!n_2!...n_s!)} \tag{1.2}$$



Taking the logarithm of W and approximating the factorial for large N using Stirling's formula gives

$$\log W = \log N! - \sum_i \log n_i! \approx -N \sum_i \frac{n_i}{N} \log\left(\frac{n_i}{N}\right) = -N \sum_i p_i \log p_i \quad (1.3)$$

where $p_i = \frac{n_i}{N}$ is taken to be the probability that a particle is in cell i, provided N is sufficiently large. The entropy S is defined by

$$S = -k_B \sum_i p_i \log p_i \quad (1.4)$$

There are two constraints

$$\sum_i p_i = 1 \quad (1.5)$$

$$\sum_i p_i \epsilon_i = \bar{\epsilon} \quad (1.6)$$

where ϵ_i is the total energy of cell i, and $\bar{\epsilon}$ is the average energy per particle.
